

SPANISH BLACK TESTING RESULTS

ASTM Testing Results

Tested per ASTM specification. A summary of the results is as follows:

Spanish Black

	Average Breaking Load (lbs)	Water Absorption (%)	Depth of Softening (inches)
ASTM - C406 - 10 Specification	575 min.	0.25 max	0.002 max
Spanish Black	975	0.07	0

When Split	1 Year
Dark Gray / Black	Little to no change

Breaking Load: The Slate is put under a defined amount of increasing pressure until the slate ruptures.

Water Absorption: A sample of slate is weighed, then it is soaked in water for a fixed period of time, then dried, and re-weighed. The weights are proportioned.

Depth of Softening: A slate sample is treated with acid to determine the acid penetration depth into the slate.
