

Williamsburg 805 Natural Slate Roofing

- Unfading Black Color
- 100 Year Guarantee
- ASTM C406 S-1 (the highest grade)

Product information

Product profile

The Williamsburg 805 Slate was formed 505 million years ago. A true geological slate exhibiting a range of properties that make it highly suitable for use as roofing slate. The quarry is situated about 3 miles west of the village of La Bana in the Cabrera Mountains, Spain approximately 4,750 feet above sea level.

Appearance

An unfading black slate, Williamsburg 805 is riven with a distinctive texture. Its color is totally natural and will not fade or change color even in the harshest sunlight.

Testing

Williamsburg 805 slates conform to ASTM slate standard (C406), achieving the highest grade (S1). In addition, Williamsburg 805 has been tested to the rigorous French Standard NF 228.

Guarantee

You should never have to bear any risk when you're choosing what to put on your roof. Based on the excellent ASTM C406 results, achieved by Williamsburg 805, we are confident to take on all the risk and guarantee your Williamsburg 805 roof for up to 100 years.
