

Antares Natural Slate Roofing

- Unfading Color
- 100 Year Guarantee
- ASTM C406 S-1 (the highest grade)

Product information

Product profile

Antares, the diamond of natural roofing slate, quarried in Argentina, is not actually slate, it is phyllite. Phyllite is one step along in the metamorphic chain being subject to heat and pressure for a longer duration than typical slate. Specifically, this rock heralds from the pre Cambrian era and is approximately 650 million years old. Harder, denser and stronger than slate, phyllite is a perfect stone for any design challenge or artistic feature.

Appearance

Antares is an unfading stone - medium grey in color with a tinge of green. It has a characteristic phyllitic sheen that is a natural consequence of the mica minerals present in its geological makeup.

Testing

Antares slates conform to ASTM slate standard (C406), achieving the highest grade (S1).

Guarantee

You should never have to bear any risk when you're choosing what to put on your roof. Based on the excellent ASTM C406 results, achieved by Antares, we are confident to take on all the risk and guarantee your Antares roof for 100 years.

Sizes, pieces per square and exposure

Imperial inches	Metric cm	Pcs per square	Exposure at 3" lap
24 x 12	60 x 30	115	10 1/2"
22 x 12	55 x 30	126	9 1/2"
20 x 12	50 x 30	141	8 1/2"
20 x 10	50 x 25	170	8 1/2"
18 x 12	45 x 30	160	7 1/2"
18 x 10	45 x 25	192	7 1/2"
16 x 10	40 x 25	222	6 1/2"
16 x 8	40 x 20	277	6 1/2"
14 x 10	35 x 25	262	5 1/2"
14 x 8	35 x 20	327	5 1/2"

Thickness and weights

Antares is hand split by craftsmen into several nominal thicknesses:

1/4" - 3/8" (6-8mm) - average weight: 850 lbs/sq

1/4"+ (8-10mm) - average weight: 1100 lbs/sq

Other thicknesses 3/8" and 1/2" available on request.
